
REMARKS/ARGUMENTS

The undersigned wishes to thank the examiner for his careful examination, and accordingly there are changes to claims 2, 3 and 4 correcting the errors noted regarding 35 USC 112 .

Reconsideration and allowance is requested.

The undersigned is responsible for the somewhat obtuse language of former claim 2, and this amendment corrects the language questioned by the examiner. Basically, the claim 2 is directed to the circuit of Figure 2, while the additional claims relate to that structure as used in Figure 4. The claims have been amendment to more clearly track the drawings and specification. If there is some further change needed, though none are recognized now, a telephone call with suggestions to the undersigned will be appreciated so this application process can be completed.

Because the dependent claims based on the amended claim 2 relate to a different kind of circuit than the broad mechanism of the reference and former claim 1, Claim 2 in the new combination along with the claims upon which they depend are considered separately patentable.

This application is believed to be in condition for allowance and notice thereof is requested.

Respectfully Submitted,
For the Inventor(s):

/Lynn L. Augspurger/
